

# LAGOS CITY POLYTECHNIC, IKEJA

## SCHOOL OF ENGINEERING AND APPLIED SCIENCE

### DEPARTMENT OF ELECTRICAL ENGINEERING

#### 2015/2016 SEMESTER EXAMINATION

1. (a) (i) Explain the function of a transducer in engineering measurement.  
(ii) List three different types of transducers used in the measurement of physical quantities and state the physical quantity each is used to measure.

COURSE	TITLE	ELECTRICAL	MEASUREMENT
(b) Briefly explain the following as applied to signal from the transducer.	(i) Signal conditioning	AND CONTROL III	NO OF QUESTION: 6
COURSE CODE: EEL 311	(ii) Scaling		TIME: ALLOWED: 2 1/2 HRS
FOR WHOM:	(iii) Calibration	HND YR I EE	P/T INSTRUCTIONS:

- Answer (a) any (i) List 3 types of temperature transducers and indicate which is active and which (ii) Explain the function of a transducer in engineering measurement.  
1. (a) (i) Explain what happens in (i) active transducer and (ii) passive transducer.  
(ii) List three different types of transducers used in the measurement of physical quantities and state the physical quantity each is used to measure.

- (b) Convert the following from:  
(b) Briefly explain the following as applied to signal from the transducer.  
(i)  $500^{\circ}\text{C}$  to  $^{\circ}\text{R}$  (Rankine)  
(ii)  $520^{\circ}\text{C}$  to  $^{\circ}\text{F}$ .  
(iii) Calibration

- (c) Write down the mathematical expression for calculating the emf produced from the (a) (i) List 3 types of temperature transducers and indicate which is active and which (ii) Explain what happens in (i) active transducer and (ii) passive transducer.  
Determine. The emf produced for a thermocouple whose junction are kept at  $10^{\circ}\text{C}$  and  $90^{\circ}\text{C}$ , respectively. Thermoelectric constant at  $10^{\circ}\text{C}$  is  $50\mu\text{V}/^{\circ}\text{C}$  and that (b) Convert  $90^{\circ}\text{C}$  the is following from:  
(i)  $200^{\circ}\text{F}$  to  $^{\circ}\text{K}$  (Kelvin)

3. (a) (i) What does the term RTD stand for in resistance thermometers?  
(ii) Explain briefly the working of RTDs and name the two major types of resistance thermometer.

- (c) Write down the mathematical expression for calculating the emf produced from the (b) One of the applications of RTD is overcurrent protection of electrical load in a circuit  
junctions of two dissimilar metals kept at temperatures  $T_1$  and  $T_2$  ( $T_1 > T_2$ ).  
Determine. The emf produced for a thermocouple whose junction are kept at  $10^{\circ}\text{C}$  and  $90^{\circ}\text{C}$ , respectively. Thermoelectric constant at  $10^{\circ}\text{C}$  is  $50\mu\text{V}/^{\circ}\text{C}$  and that circuit works  $90^{\circ}\text{C}$  to provide overcurrent protection.

- (c) The shunt winding of a motor has a resistance of  $80\Omega$  at  $15^{\circ}\text{C}$ . Find the its resistance at  $50^{\circ}\text{C}$ . (Resistance temperature coefficient of copper is a  $0.004/^{\circ}\text{C}$  at  $0^{\circ}\text{C}$ ).

4. (a) Describe the principles of pressure measurement using the following devices.  
(b) State the advantages and disadvantages of using these devices.  
circuit (i) Liquid column manometer  
(ii) Bellows  
(iii) Bourdon tube.  
the circuit works to to provide support overcurrent protection.

- (b) The shunt winding of a motor has a resistance of  $80\Omega$  at  $15^{\circ}\text{C}$ . Find the its resistance at  $50^{\circ}\text{C}$ . (Resistance temperature coefficient of copper is a  $0.004/^{\circ}\text{C}$  at  $0^{\circ}\text{C}$ ).
